THE SCOUTING REPORT · 2026

MATT JONES

Software with a baseball soul.

A field guide to **matt-jones.org** — what the site is, how it's built, and every project on the roster. One part portfolio, one part scorecard.

PLAY BALL.

THE BALLPARK

ABOUT THE SITE

matt-jones.org is a personal home base — a portfolio that wears its obsessions on its sleeve. The whole site is built around a single running metaphor: a baseball scorecard. Type is set in condensed, all-caps display faces; section labels read like stat-sheet columns in monospace; and a dashed red rule — the stitch of a baseball's lacing — is threaded through every divider, card, and menu.

Underneath the theme it's a fast, hand-built static site: no framework, one clean stylesheet, and a design language that holds together from the hero down to the footer. It splits into two dugouts — **Software** and **Baseball** — and invites you to book a time whenever you'd like to talk shop.

WHAT'S ON THE FIELD

FEATURES

DESIGN LANGUAGE

THE SCORECARD LOOK

Baseball stitching, condensed caps, monospace stat-labels, and an outfield-green and lacing-red palette carried across every page.

LIGHT & DARK

DAY GAME OR NIGHT GAME

Colors respond automatically to the reader's system theme, with a hand-tuned palette for both light "paper" and dark "under the lights" modes.

BOOKING

INTERACTIVE CALENDAR

A weekday-only month grid: pick a day and a window and the booking email writes itself — subject, date, and time all pre-filled.

NAVIGATION

TWO DUGOUTS

A sticky top bar with Software and Baseball drop-downs, so the whole roster is one hover away from anywhere on the site.

CRAFT

MOTION

ACCESSIBLE & RESPONSIVE

Focus rings, ARIA labelling, tabular numerals, and a layout that reflows cleanly from a wide desktop down to a phone.

REVEAL ON SCROLL

Sections ease in as they enter the viewport — and quietly turn themselves off for readers who prefer reduced motion.

DUGOUT ONE

THE SOFTWARE ROSTER

The building side of the house — experiments and tools, mostly at the intersection of language models, monitoring, and things worth automating.

LINEUP — SOFTWARE		POS / PLAYER / SIDE
1	**LLMADNESS** Bracket-style face-offs for language models — pit answers head-to-head, March-Madness fashion, and let the better response advance.	LLMS
2	**AICOMPARED** Send one prompt to Claude, GPT, Gemini, Mistral, and Cohere at once and compare the answers side by side. Typed, key-safe provider config.	LLMS
3	**CRY WOLF** An alerting study in the cost of false alarms — when a signal is worth waking up for, and when the wolf isn't really at the door.	MONITORING
4	**THE BULLZEN** Calm in the bullpen — a focused workspace for keeping track of what's warming up next without the noise.	TOOLING
5	**WINDHOVER** Named for the hovering kestrel — a watcher that holds steady over a system and waits for the moment that matters.	MONITORING

ⓘ AICompared and the booking calendar are profiled on the next pages from their source. The remaining line-ups mirror the site's Software menu.

DUGOUT TWO

THE BASEBALL ROSTER

Where the theme becomes the subject — small tools and write-ups for people who count outs and clinching scenarios for fun.

LINEUP — BASEBALL		POS / PLAYER / SIDE
1	**MAGIC NUMBER** The number every fan counts down: the wins-plus-rival-losses a club needs to clinch. A live season tracker that does the math for you.	STANDINGS
2	**BLACK INK** A nod to Bill James's Black Ink Test — how often a player led the league, and what all that bold type says about a career.	SABERMETRICS
3	**SCOUTING REPORT** The old-fashioned look — tools, grades, and notes on who's worth watching, written the way a scout keeps a book.	SCOUTING
4	**BOOK A TIME** The site's interactive scheduler — a weekday calendar that drafts your meeting request in one click. Profiled next.	LIVE TOOL

UP CLOSE

FEATURE SPOTLIGHTS

Two projects with published source, profiled in a little more detail.

AICOMPARED

SOFTWARE · TYPESCRIPT

A tool for comparing responses across AI providers. One prompt fans out to every model you've configured — **Anthropic (Claude), OpenAI (GPT), Google (Gemini), Mistral, and Cohere** — so their answers can be read side by side.

The design leans on doing the unglamorous parts well: a single typed configuration module loads each provider's key from the environment, treats blank values as "not configured," and fails loudly with a helpful message the moment a key is actually needed. Keys live in a git-ignored `.env`, never in the code, and a `config:check` script prints exactly which providers are ready to go. Bring only the keys you have; it skips the rest.

TYPESCRIPT · NODE · ESM · 5 PROVIDERS · KEY-SAFE CONFIG · DOTENV

BOOK A TIME

BASEBALL · VANILLA JS

The site's scheduling page, and a neat demonstration of the whole design language in one interaction. A weekday-only month grid — "the weekend is for baseball" — lets you pick a day and a time window (Morning, Afternoon, or Evening, all Central).

There's no backend and no third-party widget: a small hand-written script builds the calendar, limits the view to the next couple of months, and composes a ready-to-send `mailto:` link with the subject and body already filled in. Cold email works too — calendars optional. It's accessible by keyboard, respects reduced-motion, and looks right in both day and night themes.

VANILLA JS · NO DEPENDENCIES · ACCESSIBLE · MAILTO FLOW · LIGHT / DARK

THE BOX SCORE

SUMMARY OF WORK

Across the roster, the through-line is a builder who likes small, sharp tools and cares about how they feel to use. On the **software** side that shows up as work around language models — comparing them (*AICompared*), bracketing them (*LLMAdness*) — and around monitoring and the discipline of a good alert (*Cry Wolf*, *Windhover*, *The Bullzen*).

On the **baseball** side the same instinct points at the game itself: tracking a pennant race (*Magic Number*), measuring greatness (*Black Ink*), and keeping a scout's book (*Scouting Report*). Tying it together is the site itself — a from-scratch static build with a coherent visual system, real interactivity, accessibility baked in, and not a stray pixel out of place.

FOCUS

LLMS & TOOLING

Comparing models, taming alerts, automating the tedious.

CRAFT

DESIGN-LED

One system, carried end to end — type, color, motion, a11y.

OFF THE CLOCK

BASEBALL

Standings, sabermetrics, and scouting, built for fun.

LET'S TALK BALL.
